

WORK INTELLIGENCE

Permit IQ

The permit-to-work intelligence
layer for oil & gas

**Learn the rulebook.
Prepare the job.
Verify the field.**

The permit protects the job — but the system stops at the form

TIME

Preparation, walk-downs,
tests and signatures can
rival the wrench time.

THE WORKFORCE

**Large. Multilingual.
Rotating.**

THE FORM

Generic by design.

THE EQUIPMENT

Specific in every detail.

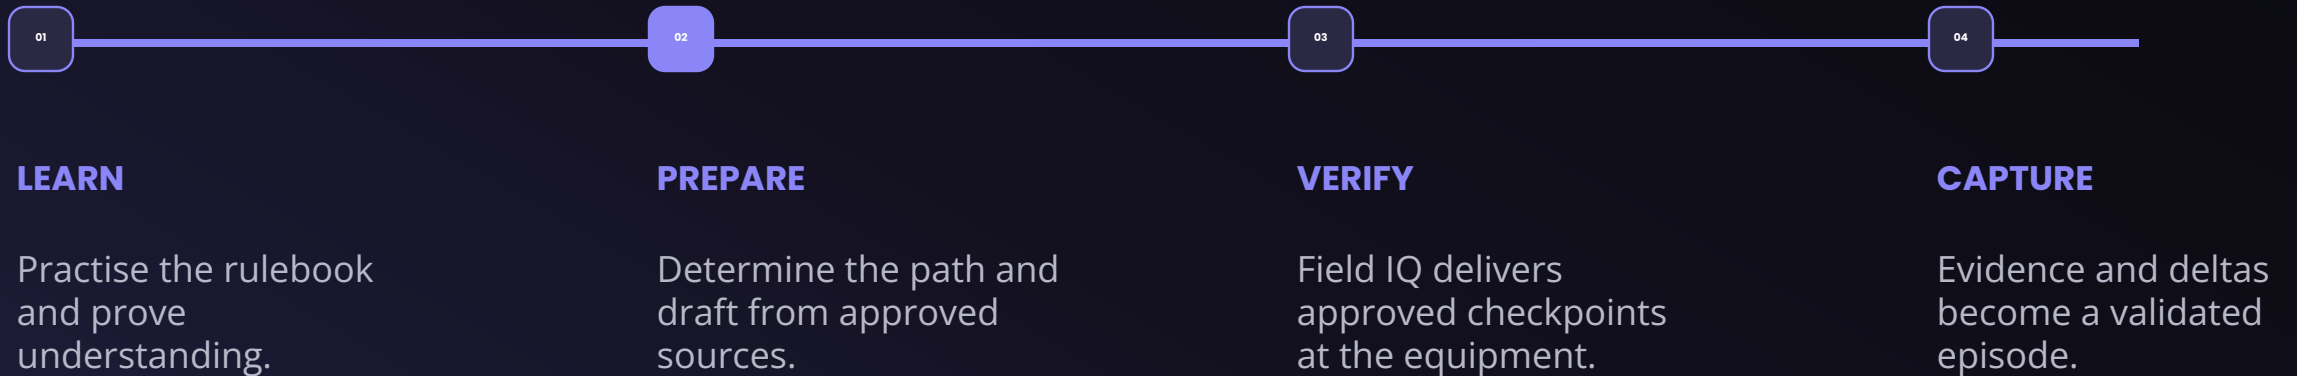

THE LOSS

**Experience disappears
after close-out.**

The signed permit records authority.

Permit IQ connects authority to understanding, equipment and evidence.

One governed journey turns a permit into Work Intelligence

IMPROVE sits beneath every stage: the Distillery returns only reviewed, approved learning.

Five product roles behave as one assistant

ENTRY

NAVIGATE + EXPLAIN

The correct sequence, the exact clause, the worker's language.

1

DRAFT

CO-PILOT

Approved procedure + equipment intelligence + provenance.

2

LEARN

TRAINER

Simulation, assessment and certification rehearsal.

3

FIELD

VERIFIER

Approved checkpoints packaged for Field IQ delivery.

4

Training turns rules into readiness

RULE

Learn the company's exact permit process.

REASON

Understand why each control exists.

REHEARSAL

Practise decisions before the field.

Simulation is the lowest-risk entry into operations — and the fastest path to trust.

Permit competence becomes a repeatable learning system

SITE

The operator's current rulebook — not a generic curriculum.

LANGUAGE

Plain explanation; original clause always visible.

PRACTICE

Permit selection, forms, inspections and stop-work judgment.

PROOF

Scored decisions and demonstrated understanding.

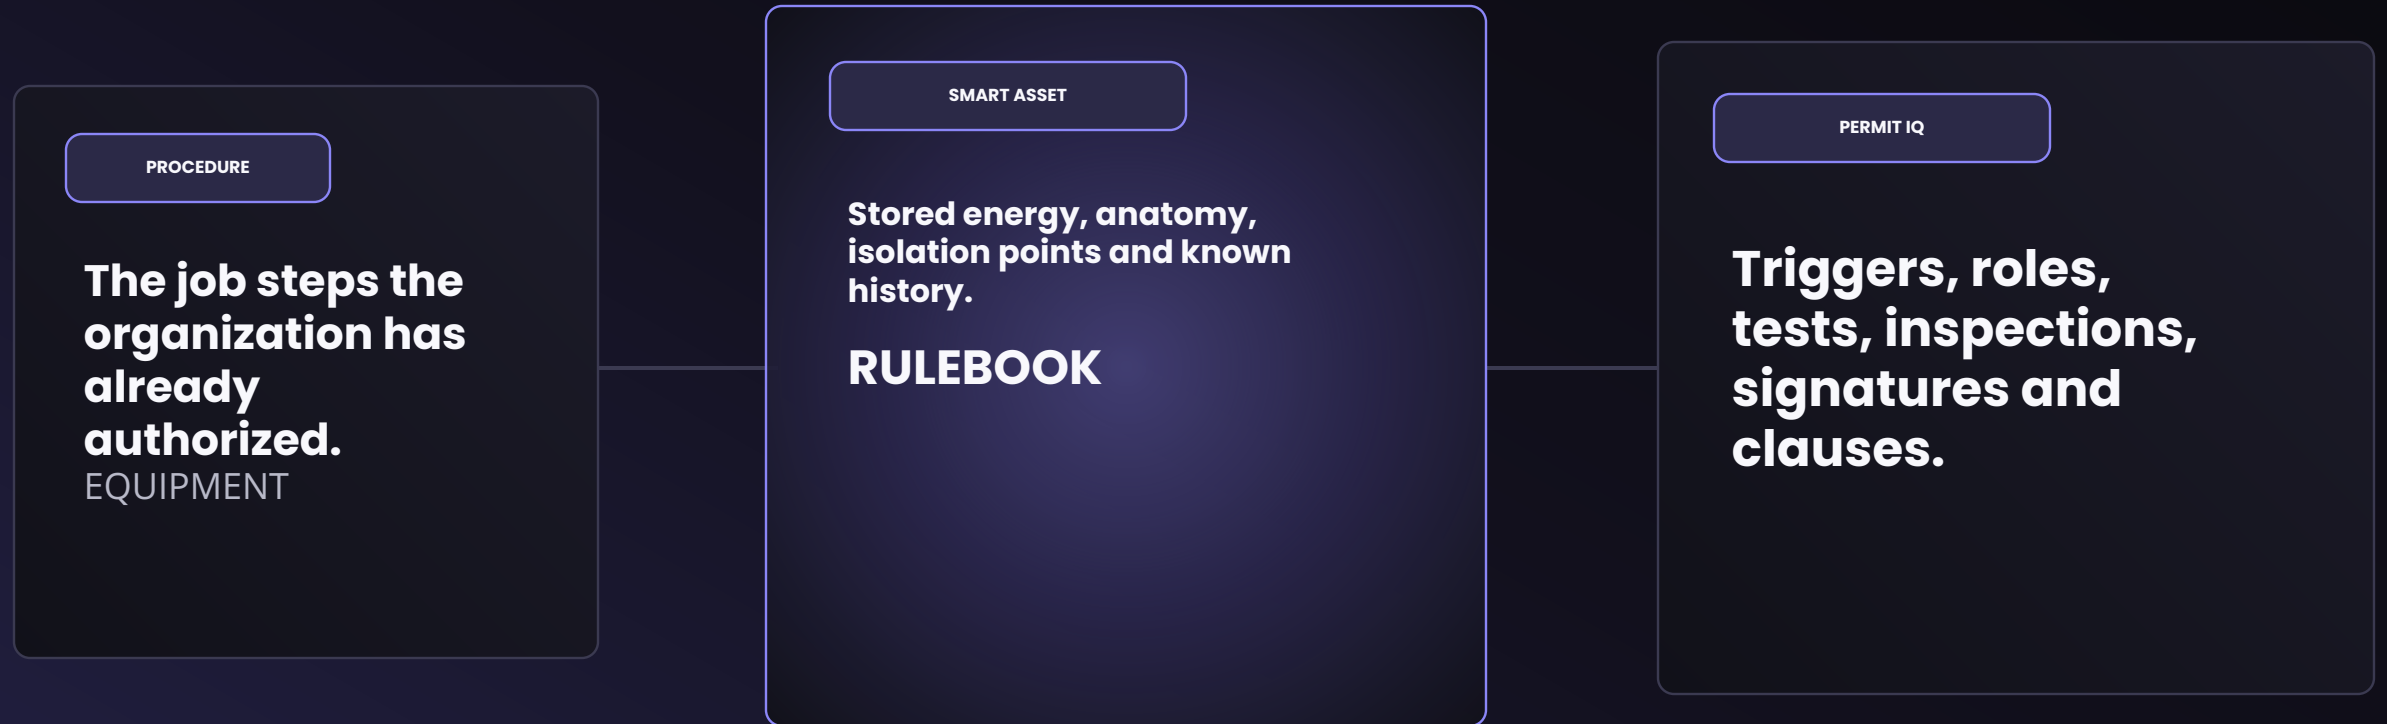

RECURRENCE

Certification and recertification repeat by design.

Permit IQ accelerates competence without claiming to issue customer certification.

Preparation has three sources — and one human owner

APPROVED

A qualified person edits and approves the assembled draft before it can become official.

Equipment intelligence makes the generic form specific

P-4501B

Identity, anatomy and service.

ENERGY

Electrical, rotational and trapped pressure.

ISOLATION

Expected points linked to the approved procedure.

HISTORY

Known failure modes and approved incident references.

PROVENANCE

Every drafted field can show what supported it.

The model assembles approved evidence. A qualified person decides what is correct for this job.

Human authority is structural — not a disclaimer

DRAFT

EDITABLE

Nothing generated is official.

1

APPROVAL

ROLE-GATED

Role, time and exact version are recorded.

2

AUTHORITY

SIGNED PERMIT

Every field surface points back to it.

3

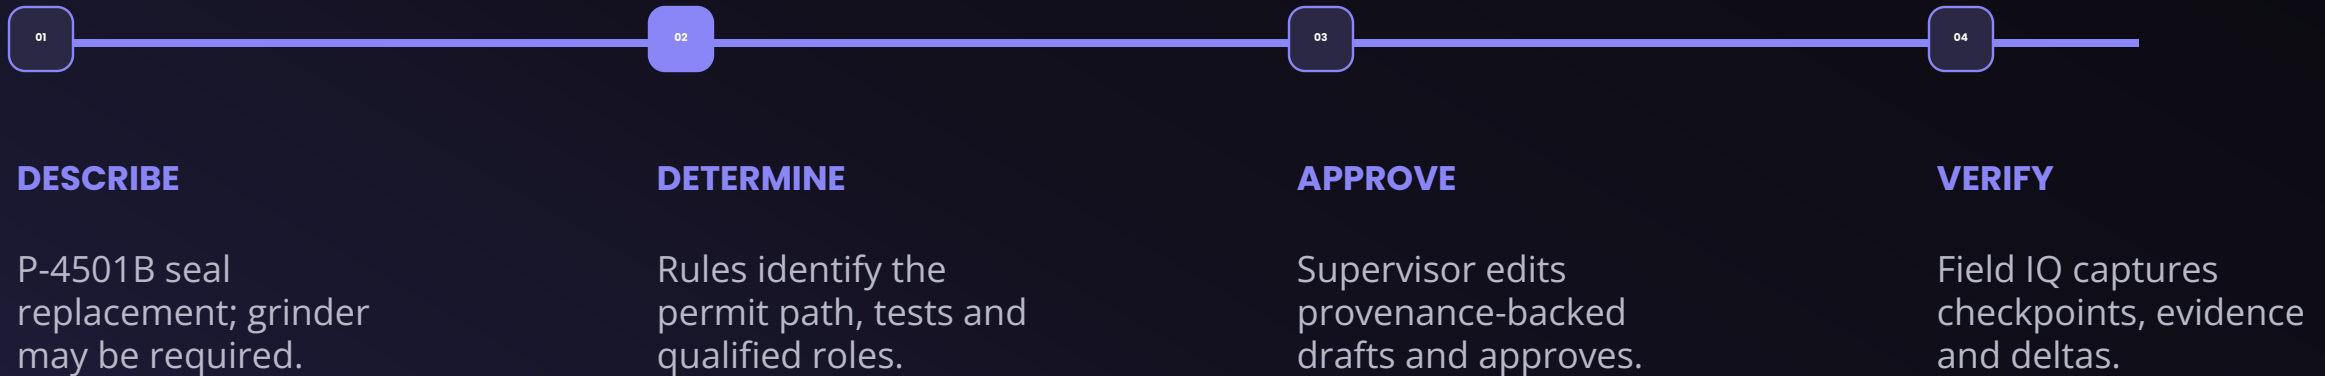

UNCERTAINTY

FAIL CLOSED

Missing or conflicting evidence stops the answer.

4

One pump-seal job proves the complete product

The same physical job through two rulebook archetypes proves the engine is reusable.

FIELD IQ

Approved intent reaches the real equipment

RECOGNIZE

Correct asset

REFER

Signed permit

CHECK

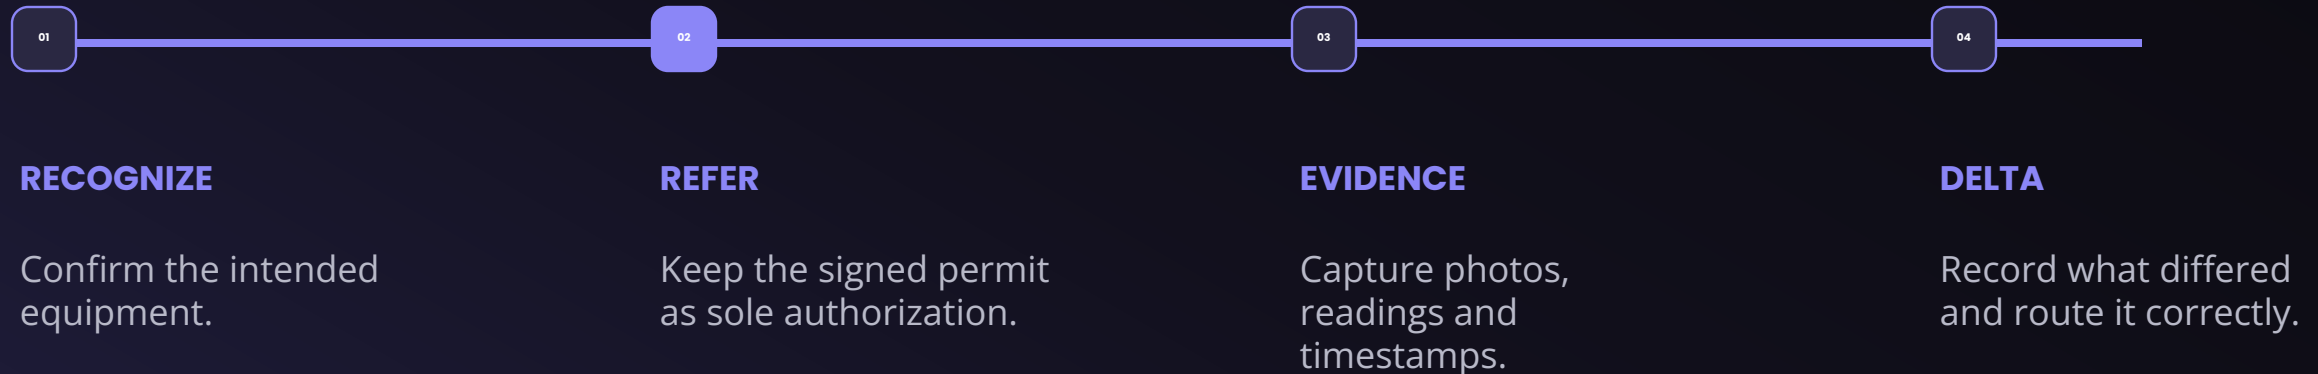

Approved points

CAPTURE

Evidence + delta

Permit IQ cannot claim a physical check without Field IQ — or another approved field client — capturing the event.

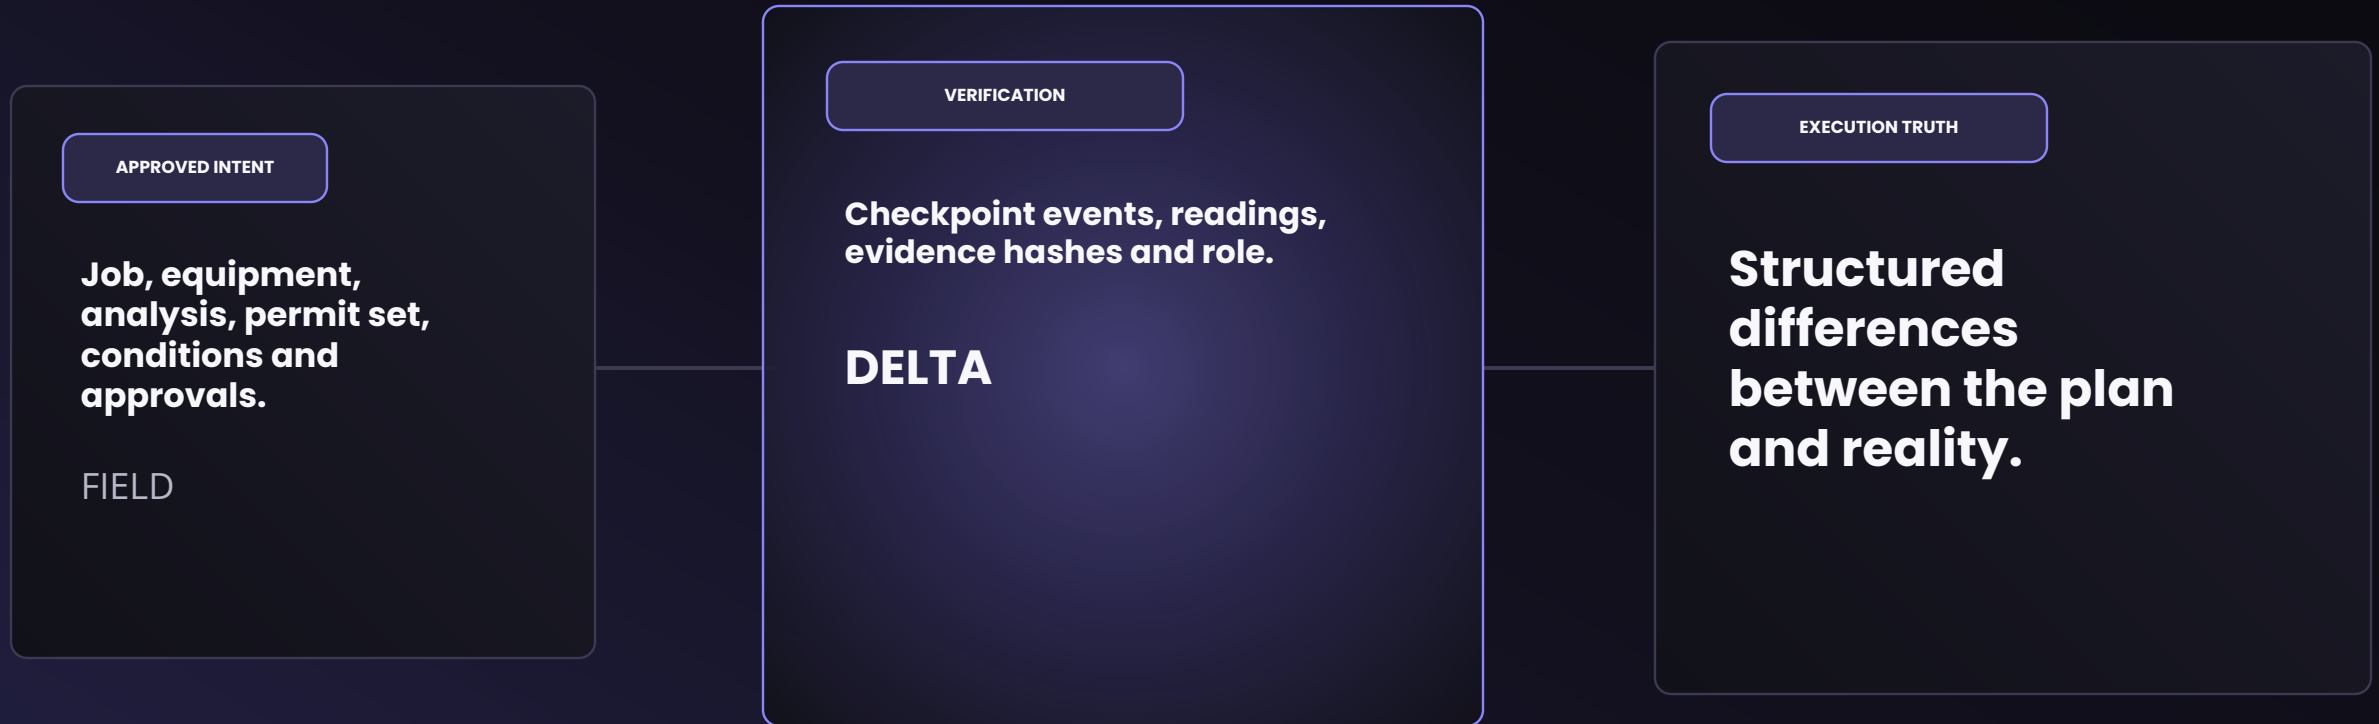

Field verification turns intent into structured evidence

Field IQ guides and records. A qualified worker independently verifies physical safety.

The output is a validated work episode

PLAN

Not another video archive: a customer-resident, append-only record of how work actually happened.

The Distillery converts field learning into governed improvement

COLLECT → VALIDATE → DISTILL → APPROVE → DEPLOY

Nothing rewrites a controlled rule automatically.

Permit IQ activates capabilities EON already has

ASSET

UNIVERSAL

Smart components,
recognition and
configuration.

1

BEHAVIOR

EON LIVE

Reactive physics and
consequence.

2

EXPERIENCE

SITUATION ROOM

Approved incident
knowledge and context.

3

LOOP

FIELD + DISTILLERY

Execution capture and
governed improvement.

4

Competitors digitize a form. Permit IQ connects the work loop.

RULEBOOK

Exact terminology,
forms, roles, triggers and
clauses.

EQUIPMENT

The real asset's procedure,
energy, isolation and
history.

LEARNING

Validated episodes
governed through the
Distillery.

FIELD

Approved intent delivered
and evidenced through
Field IQ.

POSITION

Coexist with ePTW —
improve its inputs and
evidence.

The moat is the connected EON stack and the Work Intelligence it compounds — not the language model.

Trust comes from what Permit IQ refuses to do

NO INVENTION

SOURCE OR SILENCE

No unsupported safety
requirement, threshold or
procedure.

1

NO AUTHORITY

SIGNED PERMIT

Never issue, override or
verify zero energy.

2

NO PRETENSE

FAIL CLOSED

Show uncertainty and
route the question.

3

NO SURVEILLANCE

WORKER PROTECTION

Minimize identity; never
rank individuals.

4

Approve the Permit IQ product story

Oil & gas first • training-led entry • one pump job • one governed loop
